2024 School Program

Studying Engineering at UWA

The Engineering program at UWA has been developed with industry to equip you with the skills to succeed in your future careers. The course is built upon three core principles: Relevance, Integration and Excellence. Engineering at UWA is relevant to the contemporary world of engineering, integrates knowledge, technical capability and practical skills to create exceptional graduates.

Sustainable Energy Technology

Overview

This micro-credential explores the engineering definition of sustainability, as applied to the diverse landscape of conventional and emerging energy resources.

Content

From the thermodynamic origins of energy to the economic, environmental, and societal constraints on its storage and use, the micro-credential will explore the use of engineering technologies to maintain and grow global prosperity, including renewable energy storage, carbon capture, and the yet unrealised potential of large-scale automation and machine learning.

You'll learn to

- Describe how various energy sources and storage mechanisms affect climate change;
- Identify historical and emergent constraints on energy production, manipulation, and storage; and
- Quantify energy storage in materials using fundamental and empirical methods.
